Smart Connect at KBCC

To improve the user experience for staff at KBCC, we have a new application called Smart Connect. After you login to the KBCCStaff Wi-Fi network, you will see a new page. Click on the “Connect to the secure network” button, and the Wi-Fi system will configure your device to connect seamlessly to the Wi-Fi network. The next time you’ll have to login to KBCCStaff again is when the system makes you change your password.

![Figure 1 iPhone Smart Connect Page](image)

Smart Connect is a piece of software downloaded to a user’s device that automatically configures the appropriate parameters for each type of device to connect to the network. The experience is slightly different for Windows, Android and Apple devices. The instructions and screenshots that show the Smart Connect process for each type of device that you bring on to campus are in the following sections.

You can choose not to use Smart Connect and continue using the network as you have every day.

When you change your account password, you will have to reconnect to the KBCCStaff wireless network, login, and re download the Smart Connect software so that your new password is embedded in your device. Smart Connect will then reconnect you to the secure network again.
Apple DEVICES

iDevs will have a profile created by Smart Connect on their devices that contains the network connection information. If you have an iPhone, iPad or iPod, the process will look very similar to the following screens:

Figure 4 iPod Smart Connect Configuration Smart Connect screen

To connect to the secure network please:

1. Click the install button and accept all questions.
2. Go to Home Screen > Settings > Wi-Fi
3. Choose the "KBCCStaffLive" network

If you are not prompted to accept a network configuration profile after tapping the install button, please tap the cancel button at the top right of the screen and then accept the profile.

ANDROID

Devices running Android will be redirected to the Google Play store to download Smart Connect. Clicking on the Smart Connect button after logging in will take you to the Play store to download and install the app. After you download the app, press the back button on your device to get back to the offer page and click the Smart Connect button. The app you just downloaded will launch and configure your device.

The following Smart Connect screenshots take you through the process of offer to reconfiguration.

Windows clients will download the Smart Connect agent from the IDM system directly. The following are Smart Connect screenshots of the process from another customer’s network. They take the user through the download and reconfiguration process. You must have Java enabled in your browser for this to work. Internet Explorer and Chrome are recommended.

Figure 16 Allow Program to Run
Welcome to the Smart Connect network configuration tool. This program will configure your device so that it can authenticate to the network.

1. Please enter your credentials to access the network:
   - Username: cpunkett
   - Password: ********

2. Click Start to configure your computer and connect to the network.

Congratulations your computer is now configured so that it can connect to the network.

Press connect now for network access.
